Wayss & Freytag Spezialtiefbau - Your partner in construction

Wayss & Freytag Spezialtiefbau GmbH is your partner for demanding ground engineering work.

With our well-established and reliable team of skilled workers, foremen, technical and commercial staff, we offer professional competence based on sound knowledge and decades of experience. Our team looks forward to meeting your challenges.

As a subsidiary of Wayss & Freytag Ingenieurbau AG, we contribute to the realization of complex infrastructure projects. As part of the Royal BAM Group, we cover almost all facets of ground engineering work throughout Europe. The high quality of our construction projects stands proof for our capabilities.

Our main activities are

Diaphragm walls and slurry walls

excavated by crawler cranes and wall grabs
or trench cutters
for temporary or permanent structures
with adapted joint system

Bored piles

single piles or pile walls
executed with full or partial casing or
fluid-supported

Anchors

temporary or permanent ground anchors,
nails or micropiles

Ground injections

in soil and rock

Ground freezing

Design and construction of turn-key pit structures
